

# Winter Control Program

The Town of Conception Bay South strives to provide an effective and efficient Winter Control Program for residents and the traveling public by:

- Condition Monitoring
- Anti-icing/De-icing
- Snow Clearing
- Sidewalk Snow Clearing
- Snow Removal

## Did You Know?

- Priority for snow-clearing roads is determined by street classification and Town parking lots by usage; de-icing and snow clearing are also determined by local environmental conditions.
- Sidewalk clearing takes place once streets are clear, and is prioritized by school zones, Route 60, then remaining areas.
- Additional contractors are called in during major weather events.
- Equipment generally does not de-ice and plow simultaneously.
- Cul-de-sacs are salted or cleared in a counter clockwise direction with centre snow piling.
- Snow removal is completed as conditions allow and generally in the evening and night.
- Route 60, Foxtrap Access Road, Peacekeepers Way, and the Manuels Bypass are maintained by the Department of Transportation and Works.

## By The Numbers...

- Approximately 35 full and part-time staff support the engagement of 18 pieces of snow-clearing equipment within a 24-hour period.
- 3 shifts are scheduled 24 hours a day, 5 days a week, with weekend on-call as needed.
- Municipal workers are responsible for clearing 237 km of public roads, 31 km of sidewalks, and 75,000 m<sup>2</sup> of public/parking lots.
- Even with the full fleet in operation it takes approximately 8 hours to clear the entire Town.
